

INTRO

Generally, trade industry has continued to be with humans from primitives to us. It is getting bigger day by day and more people from different parts of the world are joining the industry.

One of the Bitcoin aims is to resolve financial constraints in the world. We are trying to maximize both economic development of Bitcoin market and profits of societies so that many people and societies can overcome poverty.

We are trying to provide a free and international platform for giving trade signal, token analysis, and introducing various shares to the customers and traders.

The goal of the designers of this project is to help experienced and newcomer traders of the world without any restrictions to access Altcoin signal information, tokens and shares in different markets such as Forex stock markets and cryptocurrency.

By a structured bonus application, we will try to provide a profitable and attractive platform which is highly efficient for all those people who work with financial tools so we can help them. We will share the income from adverts with influential and contributing members.

Introduction

Trade in Cryptocurrency market has increased in last 5 years and it will get maximized in the future.

This platform aims at initiating a dapp (Decentralized application) to eliminate the bilateral constraints of traders and signal providers so that they can easily and freely exchange information and develop their business.

In this platform, all players and anyone who has a account can have earnings and get their profits in both ups and downs of the market. For the first signed up accounts which are active in first 3 weeks, project tokens will be offered to them.

We will offer rewarding tokens for the accounts that provide the largest profits to the users and utmost follower attraction.

We also try to offer benefit for all the members of society and we hope many people get gaining from this project and make a better life for international community, thanks to Cryptocurrency.

Problem Statement

One of the problems of social and communication networks is the centralization. There are a lot of technical and fundamental signals in this market and many signal sellers freely offer signals to the traders therefore they need a space to do their work.

Solution

We try to decentralize and step into decentralized world so that the most trustworthy accounts can offer income, value and profit to their owners. Accounts which are active in the field of signal provision and market analysis can give public or VIP services. And other users who consult these accounts can benefit from successful buy and sells and the market will be purposive and valuable for both sides.

NFT accounts

Next to decentralization in user accounts, we want to offer an NFT for each account thus the accounts can easily sell their own accounts based on the followers' credits.

Market Overview

Today, Cryptocurrency market with 2 trillion dollars trading volume and global stock market with over 100 trillion dollars trading volume and Forex market with more than 6 trillion dollars daily trading volume are active and millions of people are busy trading in these markets.

1.7 billion people around world live without bank account and access to international market.

They are deprived of world economy due to lack of financial infrastructure. Nowadays, they can join Cryptocurrency market and trading. We try to provide Blockchain services and easy trading for people around the world so they can do financial and trade exchange without having bank account.

Tokens

Financial resources needed for the development of the project is 200.000 dollars which will be collected by the help of ido (initial dex offerings) and will be spent on website and Android an IOS application development and advertisement with different aims. All payments and incomes will be through Cryptocurrency and tokens of the project.

In this project 500 million Tokens will be issued. For the convenience of the users and ease of our token's trade in various exchanges and dex s, tokens are going to be offered in Binance smart chain and Polygon Network.

300 million token on Polygon Network

200 million token on Binance smart chain

Project plan According to the project plan, implementation of the Beta plus version with all determined goals can be accessible for the users and ready to be used in 5 -8 month.

Pre-beta version is providing services now.

Tokenomics

Token Name: TDT

IDO: %20 100m

Air drop: %5 25m

Launchpad Sale: %40 200 m

For best signal Account: %7 35m

For new Account up to: %8 40m

Development: %10 50m

Team: %10 50 m

OUR ROADMAP

Phase 1

Project Ideation

Token creation

Litepaper Creation

Form Core Team

Phase 2

Website launch (traderdapp.com)

Token launch

Phase 3

Listing on Coingecko and Coinmarket cap

Listing on wallets like Trust Wallet

Dapp development Start

In July 2022 Releasing our White paper

Phase 4

Beta version in October 2022

Phase 5

Alpha version in December2022
